NVIDIA Retail Hiring Team
NVIDIA
Santa Clara, CA

Dear NVIDIA Retail Hiring Team,

I'm writing to express my strong interest in the Senior Retail Developer Relations Manager, Digital Commerce role at NVIDIA.

Over 13 years, I've led hardware products from concept to million-unit mass production including home robots at Amazon, AI glasses at Meta, and currently TPU cluster infrastructure at Google Cloud. What has consistently energized me across these roles is the intersection of emerging AI capabilities and real products. That passion led me to pursue Georgia Tech's MS in Machine Learning while working full-time, with coursework spanning deep learning, reinforcement learning, and computer vision. I've followed the rise of agentic AI closely, and I believe the next generation of retail experiences will be built by AI-native startups on exactly the kind of stack NVIDIA offers (Nemotron, NeMo Microservices, and CUDA-accelerated pipelines). Helping developers succeed on that platform is where I want to focus my next chapter.

While my path has been hardware-first, it has made me fluent in what developers and startups need most: a technical partner who understands requirements deeply, communicates across engineering and business audiences, and stays hands-on through every stage of integration. I've built those muscles managing hardware specialists, product vendor management, and robotics software integration. I'd welcome the chance to discuss how my product engineering depth, ML training, robotics research, and startup evaluation experience could help NVIDIA grow its retail developer community.

Best Regards,

Lisa D'lima

Professional Summary

Senior engineer with 13 years at the intersection of emerging AI capabilities and real products, including autonomous robotics at Amazon, AI wearables at Meta, and large scale AI compute infrastructure at Google Cloud. Currently pursuing an MS in Computer Science (Machine Learning specialization) at Georgia Tech. Experience evaluating AI and robotics startups, translating technology readiness into product strategy, and bridging engineering and business audiences across hardware, software, and research domains.

Education

Georgia Institute of Technology - M.S. Computer Science, Machine Learning Specialization (in progress) - Relevant Coursework: Machine Learning, Deep Learning, Reinforcement Learning, Computer Vision, Network Science, Software Architecture & Design, Analytics Modeling	Atlanta, GA
The Ohio State University B.S. Mechanical Engineering, Business Minor	Columbus, OH

Professional Experience

Google Cloud , Senior Product Design Engineer - Architecting mechanical and thermal infrastructure for TPU (tensor processing unit) clusters in data center rack systems, enabling large-scale AI model training and inference. - Pathfinding for next-generation AI compute hardware, including optical interconnects, liquid-cooled thermal integration, and mechanical power integration for high-density GPU/TPU workloads.	Sunnyvale, CA Sep 2025 - Present
Meta Reality Labs , Product Design Engineer - Led end-to-end design of AI-powered wearable products (Ray-Ban Meta smart glasses, Oakley Meta), integrating optical sensors, acoustics, antenna, and thermal systems into consumer devices shipped at scale. - Managed cross-functional teams including specialists, consultants, and overseas suppliers across sensor, optics, and AI interaction domains.	Sunnyvale, CA Dec 2021 - Sep 2025
Amazon Lab126 , Product Design Engineer - Researched and evaluated emerging robotics technologies, startups, and academic innovations, translating technical capabilities and technology readiness into product roadmap recommendations. - Led technical development for electro-mechanical subsystems on Astro, Amazon's first-generation home robot, from requirements definition through mass production. - Implemented diverse manufacturing processes including injection/compression molding, die cutting, gears, motors, and actuators for high-volume production.	Sunnyvale, CA May 2018 - Dec 2021
Center for Automotive Research , Vice President of Underwater Robotics Research - Founded first robotics research team at Honda and Ohio State Center for Automotive Research, establishing industry partnerships and securing funding from Honda, Battelle Maritime Systems, and LORD MicroStrain. - Led cross-functional team in autonomous underwater vehicle development, winning best research paper at AUVSI International RoboSub 2017. - Built program spanning control systems, software integration, and sensor fusion, competing internationally at RoboSub (San Diego 2016, 2017) and MATE (Newfoundland, 2015).	Columbus, OH Aug 2013 - May 2018

Technical Skills

- AI & Software:** Python, PyTorch, Deep Learning, Reinforcement Learning, Computer Vision, RAG, LLMs, Agent-based Systems, Software Architecture & Design, Analytics Modeling
- Emerging Technology & Startup Evaluation:** Technology readiness assessment, startup scouting, product roadmap translation, partner ecosystem development, cross-functional technical communication
- Hardware & Systems:** Consumer Electronics, Wearables, Robotics, AI Datacenter Infrastructure, Thermal Engineering, Sensor & Optics Integration, Electro-mechanical Integration, FEA (ANSYS), CAD (Solidworks, NX, CATIA)
- Manufacturing:** Design for high-volume production (1M+ units), supplier and partner management, quality control, FATP assembly line problem solving
